SUMMARY

Software Engineer with 4+ years of experience building high performance applications, AI-assisted developer tooling and scalable data systems across finance, manufacturing and healthcare research domains. Skilled in building durable architectures, reusable components and high-throughput workflows using Python, Java, distributed processing and Generative AI-augmented development.

SKILLS

Programming & Scripting: Python, Java, SQL, C#, Shell Scripting

Cloud & Warehousing: AWS (S3, EMR, Lambda, Glue, Athena, CloudWatch), Azure, GCP (BigQuery), Snowflake, Redshift

Big Data & Distributed Systems: Spark, Hadoop, Hive, Presto, Kafka, Flink

ETL & Data Governance Tools: dbt, Alteryx (Certified), Fivetran, Great Expectations, Atlan

Orchestration & DevOps: Apache Airflow, Dagster, Docker, Azure DevOps, Jenkins, Git, Jira

Monitoring & Visualization: AWS CloudWatch, Prometheus, Grafana, Tableau, Power BI, QuickSight

Core Competencies: Data modelling, Distributed processing, API design, Performance Tuning, CI/CD, Agile, SDLC

AI Tools: RAG, LangChain, Agentic AI, LLM APIs, MCP, Agent patterns, Vector Databases, LlamaIndex, PyTorch, Cursor

PROFESSIONAL EXPERIENCE

CSU Sacramento – Software Engineer– Research & Innovation Dept – Sacramento, CA Jan 2024 – May 2025

- Engineered scalable data models and governance workflows for 100K+ IRB records. Implemented metadata lineage and quality checks using **Atlan + Great Expectations**, strengthening compliance for regulated datasets.
- Designed reusable Python components for data transformation and validation. Collaborated with research faculty to define data requirements and deliver analytics features supporting IRB compliance. and Tableau dashboards.

Siemens Mobility Inc – Data Operations Engineer – Sacramento, CA May 2024 – Aug 2024

- Developed reusable Python ETL components and shared utilities for **Alteryx + Python workflows**, reducing duplication and improving reliability of supplier analytics systems by 35%.
- Built dashboards for spend and performance monitoring in **Tableau**, aiding energy/cost optimization to facilities operations analytics.
- Partnered with engineering, procurement and facilities teams to integrate ETL outputs into strategic decision workflows, reducing quarterly costs by 20%.

E6 Data – Product Engineer – Bangalore, India Jun 2022 – Oct 2022

- Implemented end-to-end orchestration of ETL pipelines using **Airflow DAGs** on **AWS infrastructure (EMR, S3, Lambda, Glue)**, reducing job latency by 30% and improving reliability of analytics workflows.
- Implemented real-time monitoring pipelines in **Grafana + Prometheus**, reducing data-quality incidents by an estimated 40%.
- Collaborated on **system integrations** to synchronize distributed data services. Implemented role-based access controls and secure logging across AWS data services, strengthening platform security.
- Built standardized Airflow DAG templates that improved onboarding speed and reduced pipeline creation time across teams.

KPMG – Data Engineer – Bangalore, India Jul 2019 – Jun 2022

- Constructed and enhanced **data pipelines and models** to automate data extraction from **SAP** and **Oracle ERPs**, enabling data cleansing, data transformation, and exception handling within an agile framework, resulting in 40% reduction in manual effort.
- Built and optimized data pipelines extracting **SAP/Oracle ERP data**, enabling automated data mining for 45+ U.S. clients.
- Debugged and optimized **SQL/SSAS workloads**, improving cube performance and reducing turnaround time by 30%.
- Implemented scalable transformation logic and exception-handling frameworks, reducing manual processing time by 40%.
- Delivered secure **Power BI outputs** used by 120+ audit teams, supporting decision-making, compliance and analytics initiatives.

PROJECTS

DataFlowX – Modern ETL Platform | *Snowflake, dbt, Apache Airflow, Docker*

- Configured **Snowflake RBAC** for secure data access and deployed daily **Airflow DAGs** to orchestrate **dbt** jobs, ensuring seamless scheduling, lineage visibility and 100% data validation coverage across staging, fact, and mart layers. ([link](#))

RAG Application – PDF System | *LangChain, OpenAI Embeddings, Chroma, Streamlit, Docker*

- Developed a full RAG pipeline for grounded Q&A over large PDFs using optimized chunking, embeddings and Chroma similarity search, improving retrieval relevance by 42% in evaluation. ([link](#))

LLM Video Understanding & Auto-Editing Agent | *memories.ai, LangChain, GPT-4, AWS*

- Developed a multimodal LLM-RAG pipeline that analyzes raw videos to extract scenes, emotions, and narrative beats, generating timestamped JSON edit/story plans for downstream automation. ([link](#))

LLM-Powered Chatbot with Google Sheets Integration | *GPT-4, Google Sheets API, Tkinter, Python*

- Engineered a retrieval-augmented chatbot that performs real-time semantic Q&A over Google Sheets using GPT-4 + Sheets API, increasing factual response accuracy by 85% through iterative prompt refinement. ([link](#))

EDUCATION

California State University Sacramento – MS in Computer Science

Aug 2023 – May 2025

Visvesvaraya Technological University – BE in Information Science

Aug 2015 – Jun 2019
